Scrapbook Framing Kit Directions

What's included in the kit:

- One finished frame
- One piece of 5 sided UV plexiglass
- Acid free mounting board
- Fitting kit (16 glazier points, two self-stick bumpers and a sawtooth hanger)

What you need to get started:

- Your completed 12"x12" scrapbook page
- Double sided acid-free tape (ATG) or photo corners
- 15"x15" acid free matboard
- Ruler (to measure the borders)
- Screwdriver
- Pencil

Step 1

Put the matboard on a flat table surface. Place the scrapbook page on top, using your ruler to center it (you should have a 1 1/2" border all around). Use a pencil to make guide marks on each bottom corner of the scrapbook page.

Step 2

Turn the scrapbook page over.

A) If you are using your ATG gun, apply a strip of tape across the top of the page only (taping all around will cause buckling in the long run.). Turn back over and use the guide marks to help place the page in the center. Press down and erase guide marks.

B) If you are using photo corners, apply to each corner, and press down firmly on matboard. (If you have embellishments that to the edge of your page, you are better off using the ATG tape).

Step 3

Place the plexiglass cube on top of your page and gently peel off the protective skin. Be careful if you are wearing rings, as they can scratch the surface.

Step 4

Take your frame and place on top of the plexiglass.

Step 5

Slide your fingers under each side of the frame and flip the frame over so that you now have the back of the matboard facing up. Place the acid free backing board on top.

Step 6

Using your fingers or a screwdriver, push four glazier points into each side of the frame.

Step 7

Place the sawtooth hanger in the center of the frame. Tap gently into place with hammer.

Step 8

Attach the self-sticking bumper pads to the bottom two corners of the frame.

Your picture is ready for hanging!!
